FILMMIC FOUNDATIONS

Research article submission questionnaire | Complete alongside your research PDF

Use this guide to supply the information needed for a detailed, illustrated film analysis. Answer in a separate document or fill in a copy. Mark unknown information as Unknown; do not invent facts. The PDF alone may not contain production facts, source links, or permission details.

1 Submission and identity

• Working article title and subtitle?

• Name of the film, release year, runtime, country, language, and where it can be watched?

• Film credits: director(s), writer(s), cinematographer, editor, producer, production company? Which are verified?

• Who is submitting the article? What attribution or byline should appear (if any)?

• What is the proposed article URL slug (lowercase words joined with hyphens)?

2 Research question and argument

• What is the central research question and your main claim or thesis?

• Why does this film or subject merit a detailed analysis? What is the intended audience?

• What is the scope of the argument? Which questions or claims should the article NOT make?

• What is the historical, cultural, or contemporary relevance, if supported by sources?

3 Film evidence and close reading

• Provide a concise, accurate plot synopsis (including spoiler policy).

• List major scenes in order and explain their narrative, visual, and thematic significance. Include timestamps if known.

• Describe cinematography, lighting, camera movement, framing, color, editing, sound, performance, and production design with specific evidence.

• Identify recurring symbols, visual motifs, parallels, or structural patterns. Which interpretations are speculative?

• Are there interviews, scripts, production notes, BTS footage, or filmmaker statements that support specific interpretations?

4 Research and references

• Attach the completed research paper as a searchable PDF. If scanned, also provide a text version.

• Provide the exact bibliography, URLs/DOIs, author names, publication dates, and access dates where relevant.

• For every major claim, identify its supporting source and, if possible, page number or film timestamp.

• Distinguish primary film evidence, external research, filmmaker testimony, and your own interpretation.

• Identify contradictory evidence, research limitations, or claims that still require verification.

5 Visual materials and diagrams

• Provide high-resolution stills or images in an assets folder, with descriptive filenames.

• For each image: what does it show, who owns it, do you have permission to publish it, and what credit is required?

• List preferred hero image and image placements by section; include captions and accessibility alt text.

• Which diagrams would clarify evidence (timeline, scene sequence, visual motif map)? Provide the underlying facts.

• Should any supplied PDF illustrations be extracted? Are there diagrams that must remain unchanged?

6 Publication and review

• What is the desired publication date and category (film analysis, essay, interview, etc.)?

• What should the homepage card description say (one or two factual sentences)?

• Are there links to the official film, IMDb, festival listings, or related research?

• Are there copyright, privacy, licensing, or embargo restrictions?

• Who will review the generated draft, confirm quotations and citations, and approve publication?

7 Files to provide

• Required: research PDF; completed questionnaire or notes; bibliography/reference links.

• Recommended: film stills (JPG/PNG/WebP), image credits/permissions, official film link, scene timestamps, BTS or production notes.

• Optional: pre-existing diagrams, transcripts, script, director interview, article abstract, author bio.

• Never upload confidential API keys, passwords, or unpublished personal data into the public repository.

Editorial standard: The AI builder is a drafting aid. It must not invent quotations, references, film details, production claims, or visual evidence. Human review of the article and rights clearance is required before publication.
